EDUCATION

University of Waterloo & Wilfrid Laurier University **Waterloo, Ontario**
Bachelor of Computer Science & Business Administration, Double Degree *Anticipated December 2030*

- Relevant Coursework: Designing Functional Programs (CS 145), Algebra for Honours Mathematics (MATH 135), Calculus 1 (MATH 137)
- 99.5% high school graduating average; 1540 SAT (790 Math, 750 R/W)

WORK EXPERIENCE

Royal Bank of Canada **Toronto, Ontario**
Software Engineer Intern, RBC Embark *July 2026 - August 2026*

- Built an LLM-assisted incident dashboard for a Site Reliability Engineering team using Python, FastAPI, MongoDB, and TypeScript, consolidating issue data from 3 internal tracking systems
- Developed a scheduled MongoDB data cleaning workflow that refreshed issue data while deduplicating new records to prevent existing issues from being overwritten
- Integrated an LLM API to parse and summarize lengthy, unstructured service-request descriptions, contributing to a 68% reduction in incident lookup time and helping streamline a 4-month issue backlog

FOES - Operational Consultancy Firm **Toronto, Ontario**
Business Analyst Intern *October 2025 - March 2026*

- Researched 75 private equity firms and authored a 41-page market analysis to support business development initiatives; presented findings to the senior partner
- Built AI-assisted GTM automations using Apollo and Clay to generate hundreds of targeted leads and streamline the sales pipeline

PROJECTS

The Pitch Deck (www.thepitchdeck.ca)

- Built an opportunity-discovery platform for students using Next.js, React, TypeScript, and the Google Sheets API
- Designed matching algorithm that scores opportunities based on user responses to rank recommendations
- Implemented Google Sheets API to automatically update and refresh database edits to the website, and integrated an LLM to improve opportunity discovery
- Grew the platform to 2,000+ monthly site visits and won a $1,000 regional award in the Ingenious+ national youth innovation competition

Threadline (threadline-five-rust.vercel.app)

- Created and deployed a full-stack AI email platform using React, TypeScript, Fastify, Turso SQLite powered by a Grok Model
- Automatically analyzes email threads, generates next steps and replies with convenient presets; human-in-the-loop design
- Added accuracy and anti-hallucination safeguards by having source-checking behind each claim and mandatory human review

BankingBench (bankingbench.vercel.app)

- Built a benchmark of 10 synthetic banking coding tasks (across payments, FX rounding, double-entry ledger) in Python, FastAPI, and PostgreSQL, each with common, but plausible-looking solutions to edge cases with two test suites: a basic one and naive one
- Hardened grader dropped from 20/30 to 0/30 false positives while still passing all valid solutions
- Added 33 targeted tests and clarified 3 ticket rules to close the gaps; project demonstrates how test-suite environments for model evaluations can be fooled by surface-level tests, and how the edge cases can be caught and hardened to prevent false-positives beforehand

HONORS

University of Waterloo National Mathematics Scholarship ($20,000) **May 2026**

- Selected as 1 of 15 incoming mathematics students based on exceptional academic and extracurricular achievement

Ingenious+ National Innovation Grant Recipient ($1,000) **April 2026**

- Recognized for The Pitch Deck with funding, mentorship, and recognition for Equity & Inclusion

ADDITIONAL INFORMATION

Languages: Fluent English and Hindi; Intermediate Punjabi; Basic French
Technical: Python, JavaScript, TypeScript, React, Next.js, FastAPI, MongoDB, Google Sheets API, Vercel
Interests: Badminton, Guitar, Public Speaking, Reading, Technology
